# Key Issue in Hotspot Detection?

# Key Issue in Hotspot Detection?

- ▶ The first problem in machine learning based hotspot detection is?

# Key Issue in Hotspot Detection?

- ▶ The first problem in machine learning based hotspot detection is?
- ▶ Definitely layout pattern feature extraction.

# Key Issue in Hotspot Detection?

- ▶ The first problem in machine learning based hotspot detection is?
- ▶ Definitely layout pattern feature extraction.
- ▶ We need discriminative pattern information to detect hotspot.

# Outline

Problem Background

**Conventional Methods**

Our Method

Results

# Conventional Feature Extraction

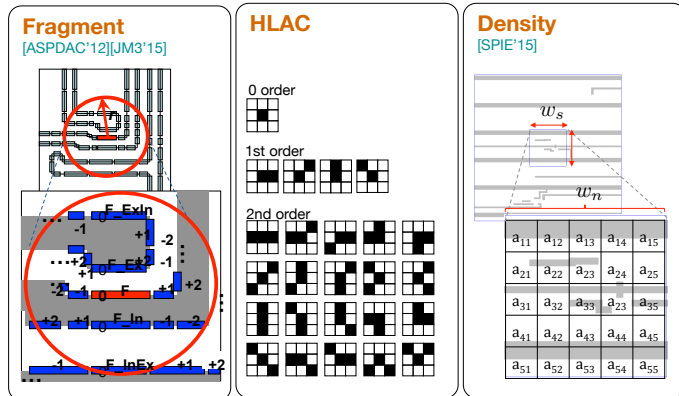

# Conventional Feature Extraction

- ▶ Fragment feature is very **complicated**, which leads to over-fitting.

# Conventional Feature Extraction

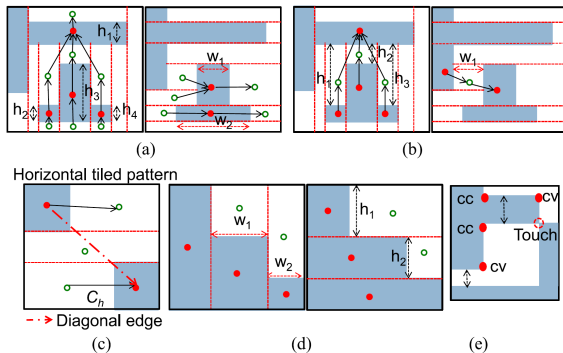

- ▶ Fragment feature is very **complicated**, which leads to over-fitting.
- ▶ High order local correlation (HLAC) is only efficient in some **image processing** task.

# Conventional Feature Extraction

- ▶ Fragment feature is very **complicated**, which leads to over-fitting.
- ▶ High order local correlation (HLAC) is only efficient in some **image processing** task.
- ▶ Density based feature **loses** some important pattern information.

# Feature in [TCAD'15]

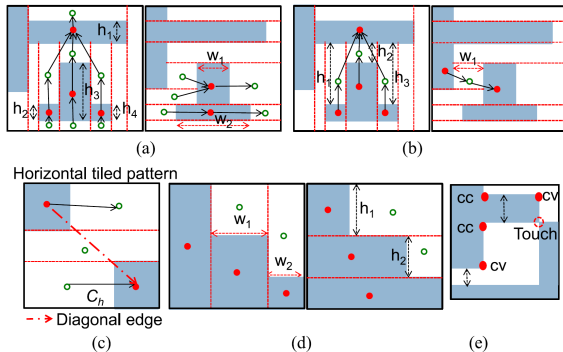

- (a) Internal feature

## Feature in [TCAD'15]

- ▶ (a) Internal feature
- ▶ (b) External feature

# Feature in [TCAD'15]

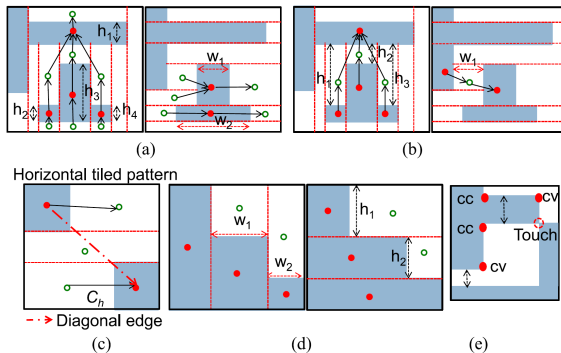

- ▶ (a) Internal feature
- ▶ (b) External feature
- ▶ (c) Diagonal feature

# Feature in [TCAD'15]

- ▶ (a) Internal feature
- ▶ (b) External feature
- ▶ (c) Diagonal feature
- ▶ (d) Segment feature

# Feature in [TCAD'15]

- ▶ (a) Internal feature
- ▶ (b) External feature
- ▶ (c) Diagonal feature
- ▶ (d) Segment feature
- ▶ Pros: **easy** and **fast** to extract.

# Feature in [TCAD'15]

- ▶ (a) Internal feature
- ▶ (b) External feature
- ▶ (c) Diagonal feature
- ▶ (d) Segment feature
- ▶ Pros: **easy** and **fast** to extract.
- ▶ Cons: still **complicated**, **hard** to detect **new** patterns.

# Density based Feature [SPIE'15]

# Density based Feature [SPIE'15]

- ▶ Side length  $l$ , grid number  $g$ .

# Density based Feature [SPIE'15]

- ▶ Side length  $l$ , grid number  $g$ .
- ▶  $a_{ij}$  denotes the density value of the grid in  $i^{th}$  row and the  $j^{th}$  column.

# Density based Feature [SPIE'15]

- ▶ Side length  $l$ , grid number  $g$ .
- ▶  $a_{ij}$  denotes the density value of the grid in  $i^{th}$  row and the  $j^{th}$  column.
- ▶ Feature vector:  
 $X = \{a_{11}, a_{12}, \dots, a_{54}, a_{55}\}$

# Density based Feature [SPIE'15]

- ▶ Side length  $l$ , grid number  $g$ .
- ▶  $a_{ij}$  denotes the density value of the grid in  $i^{th}$  row and the  $j^{th}$  column.
- ▶ Feature vector:  
 $X = \{a_{11}, a_{12}, \dots, a_{54}, a_{55}\}$

- ▶ Pros: **simple** and **efficient** compared to previous methods.

# Density based Feature [SPIE'15]

- ▶ Side length  $l$ , grid number  $g$ .
- ▶  $a_{ij}$  denotes the density value of the grid in  $i^{th}$  row and the  $j^{th}$  column.
- ▶ Feature vector:  
 $X = \{a_{11}, a_{12}, \dots, a_{54}, a_{55}\}$

- ▶ Pros: **simple** and **efficient** compared to previous methods.
- ▶ Cons: Severe layout pattern **information loss**.

- ▶ Testing stage
- ▶ Learning models: [Decision-tree](#), [ANN](#), [SVM...](#)

# Major Drawbacks of Conventional Density Based

# Major Drawbacks of Conventional Density Based

# Major Drawbacks of Conventional Density Based

- For both patterns, we can only get the **same** feature vector.

# Major Drawbacks of Conventional Density Based

- ▶ For both patterns, we can only get the **same** feature vector.
- ▶ However, their contributions to the hotspot formation are **different**.

# Local Grid Density Differential (LGDD)

# Local Grid Density Differential (LGDD)

- ▶ locally average the density value of a **specific area** in a grid.

# Local Grid Density Differential (LGDD)

- ▶ locally average the density value of a **specific area** in a grid.
- ▶ We apply **triangle area** in this paper.

# Examples of LGDD

- ▶ The **area value** of the blue region in the **shadow** part.

# Definitions for Evaluations

- ▶ **Accuracy:** The rate of correctly predicted hotspots among the set of actual hotspots.
- ▶ **Extra:** The number of falsely detected hotspots.

# Effect of LGDD

- ▶ Performance comparison between LGDD and conventional density based feature.

# Effect of LGDD

- ▶ Performance comparison between LGDD and conventional density based feature.

- ▶ The impact on accuracy.

# Effect of LGDD

- ▶ Performance comparison between LGDD and conventional density based feature.

- ▶ The impact on accuracy.

- ▶ The impact on extra.

# Stride Analysis

# Stride Analysis

- Stride is the **spacing** between two adjacent grids (horizontally and vertically).

# Stride Analysis

- ▶ Stride is the **spacing** between two adjacent grids (horizontally and vertically).
- ▶ Density based feature is a special case with  $w = s$  in our stride analysis.

# Effect of Strides

- ▶ Performance comparison among **different strides**.

# Effect of Strides

- Performance comparison among different strides.

- The impact on accuracy.

# Effect of Strides

- ▶ Performance comparison among different strides.

- ▶ The impact on accuracy.
- ▶ The impact on extra.
- ▶ The performance raises when shrinking the stride.
- ▶ However, after a threshold, the smaller of the stride, the worse of the performance.

# Learning Model

## Adaboost classifier

**Require:**  $\mathbf{X} = (\mathbf{x}_1, \dots, \mathbf{x}_n)$ ,  $\mathbf{Y} = (y_1, \dots, y_n)$ ,  $T$ .

```
1: for  $i \leftarrow 1$  to  $n$  do:
2:    $D_1(i) = \frac{1}{n}$ ;
3: for  $t \leftarrow 1$  to  $T$  do:
4:    $h_t \leftarrow$  base classifier with small error  $\epsilon_t$ ;
5:    $\epsilon_t \leftarrow P(h_t(\mathbf{x}_i) \neq y_i) = \sum_{i=1}^n D_t(i) I(h_t(\mathbf{x}_i) \neq y_i)$ ;
6:    $\alpha_t \leftarrow \frac{1}{2} \log(\frac{1-\epsilon_t}{\epsilon_t})$ ;
7:    $Z_t \leftarrow 2[\epsilon_t(1 - \epsilon_t)]^{\frac{1}{2}}$ ;
8:   for  $i \leftarrow 1$  to  $n$  do:
9:      $D_{t+1}(i) \leftarrow \frac{D_t(i) \exp(-\alpha_t y_t h_t(\mathbf{x}_i))}{Z_t}$ ;
10:  $f \leftarrow \text{sign}(\sum_{t=1}^T \alpha_t h_t)$ ;
11: return  $f$ 
```

- Decision-Tree as weak learner, more details in the paper.

# Outline

Problem Background

Conventional Methods

Our Method

Results

# Benchmark Examples

- ▶ ICCAD benchmark.

- ▶ Industrial benchmark.

# Effect of Our Methods

Table: Comparison with conventional density based method

	Density Based		Our Proposed	
	Extra#	Accuracy	Extra#	Accuracy
ICCAD-1	0	99.50%	2	<b>100.00%</b>
ICCAD-2	0	97.18%	0	<b>98.80%</b>
ICCAD-3	0	97.50%	1	<b>97.78%</b>
ICCAD-4	4	82.49%	5	<b>83.05%</b>
ICCAD-5	0	<b>95.12%</b>	0	<b>95.12%</b>
Industry	70	95.96%	26	<b>97.53%</b>
Average	12.3	94.63%	5.6	<b>95.38%</b>

- ▶ Consider both LGDD and stride analysis.
- ▶ Increase accuracy from 94.63% to **95.38%**.
- ▶ Reduce the extra number from 12.3 to **6**.

# End

## Thanks and Questions?
